

The cancellation, on a real fish

12 of 13 decoy frames; 1 rejected for a mask whose aspect ratio misses the calipered 2.95 by more than a quarter.
The uncorrected model ranges 25 % short of the in-water calibration and Pinax sits within 0.6 %, yet all three read the same length (median -2.6 / -2.8 / -2.7 %, in legend order). Length cannot see the error that range shows plainly.
